The difference which can be seen

### Brood mares. Last 12 weeks of gestation. First 12 weeks of lactation.

Density = 550 g/L

Use:

BROODMARE	Recommended quantity
Last 12 weeks of gestation	3 to 4 kg per day + forage
First 12 weeks of lactation	4 to 5 kg per day + forage

VITALACT Master is used as a supplement to forage.

We advise to feed at least 1kg hay per 100 kg of the horse's body weight. For a500 kg horse, this means a daily distribution of 5 kg of hay.

Quantities should be adjusted taking into account the weight, body condition, age, activity level and breed of the horse, in addition to the type, quantity and quality of forage given.

Supplement to forage for horses

### **Ouality milk**

Contains essential omega 3 fatty acids and selected amino acids suitable for the production of high quality milk.

## Quantity of milk

Highly concentrated nutrition to promote milk production and general body condition of mares.

## Good bone and joint development in the foal

Rich in vitamins, containing balanced minerals: calcium, phosphorus, zinc and copper.

## Good muscle development in the foal

Easily digested protein. Selected essential amino acids, lysine and methionine.

## Transmission of a wellbalanced microbiota

Vitalact Master combines active ingredients specifically designed to support a healthy, balanced microbiota in the broodmare, contributing to the foal's well-being from its very first days.

## Fertility of the mare

Vitamin A, vitamin E and selenium contribute to promoting fertility.
