Supplement to forage for horses

USE

For horses that tend to eat very quickly, it is preferable to serve the feed soaked. **Vita Fiber** with lukewarm water at a ratio of 1 part **Vita Fiber** to 2–3 parts water. Let it soak until the mixture breaks down. For particularly sensitive horses, wait 30 minutes to achieve a more liquid consistency.

Vita Fiber is used as a supplement to forage. We advise to feed at least 1.2 kg hay per 100 kg of the horse's body weight. For a 500 kg horse, this means a daily distribution of 6 kg of hay. Quantities should be adjusted taking into account the weight, body condition, age, activity level and breed of the horse, in addition to the type, quantity and quality of forage given.
